Finaity transactions

dashboard · web · 9 findings · exported 2026-11-09

SUMMARY

This high-fidelity finance dashboard presents a clean, modern aesthetic with clear categorization of metrics and charts. However, it requires attention to text contrast and accessibility standards across several metadata labels, status tags, and UI elements.

9 All | 2 Critical | 4 Major | 3 Minor | 0 Nit

9 FINDINGS

1 Low contrast secondary text and metadata

Critical defect

Text that is too close in brightness to its background is hard to read. People with weaker eyesight struggle most, but so does anyone on a phone in sunlight or on a dim screen.

Affects: People with low vision, and anyone outdoors or on a dim screen

NOW	2.9 : 1	SUGGESTED	4.5 : 1
Sample text The same words at small size		Sample text The same words at small size	

Try `#69778E` for the text colour. It keeps the look and passes.

WHAT I SEE

Search placeholder text and secondary metadata across cards appear in a muted grey (#a1abb9) on white background, measuring approximately 2.33:1 contrast ratio.

WHAT TO DO

Change the text colour to #69778E (or darker) so it reaches 4.5 : 1 on this background. It stays close to the current colour.

2 Low contrast warning and success status badges

Critical defect

Text that is too close in brightness to its background is hard to read. People with weaker eyesight struggle most, but so does anyone on a phone in sunlight or on a dim screen.

Affects: People with low vision, and anyone outdoors or on a dim screen

NOW	4.2 : 1	SUGGESTED	4.5 : 1
Sample text The same words at small size		Sample text The same words at small size	

Try `#EB1616` for the text colour. It keeps the look and passes.

WHAT I SEE

Certain semantic text indicators like expenses percentage tags and soft category highlights use pale text colors (#f86868, #1ece8e) against white backgrounds.

WHAT TO DO

Change the text colour to #EB1616 (or darker) so it reaches 4.5 : 1 on this background. It stays close to the current colour.

3 Missing y-axis units and labels on asset and investment charts

Major defect

Users cannot quickly gauge the magnitude of fluctuations without referencing the main KPI number above.

WHAT I SEE

The investments overview chart displays trend lines and points but lacks explicit currency or percentage markers along the y-axis grid lines.

WHAT TO DO

Include clear scale markers or axis labels alongside the grid lines.

4 Low-contrast text or UI measured at about 2.79:1

Major defect measured by code

Text that is too close in brightness to its background is hard to read. People with weaker eyesight struggle most, but so does anyone on a phone in sunlight or on a dim screen.

Affects: People with low vision, and anyone outdoors or on a dim screen

NOW	2.8 : 1	SUGGESTED	4.5 : 1
Sample text The same words at small size		Sample text The same words at small size	

Try `#008859` for the text colour. It keeps the look and passes.

WHAT I SEE

Code measured about 2.79:1 for the strongest element in this whole region (weakest spot 2.05:1, #1ece8e on #ffffff). That is below the 4.5:1 AA minimum for body text (3:1 for large text and UI components).

WHAT TO DO

Change the text colour to #008859 (or darker) so it reaches 4.5 : 1 on this background. It stays close to the current colour.

5 Low-contrast text or UI measured at about 2.87:1

Major · defect · measured by code

Text that is too close in brightness to its background is hard to read. People with weaker eyesight struggle most, but so does anyone on a phone in sunlight or on a dim screen.

Affects: People with low vision, and anyone outdoors or on a dim screen

NOW	2.9 : 1	SUGGESTED	4.5 : 1
Sample text The same words at small size		Sample text The same words at small size	

Try `#4B8077` for the text colour. It keeps the look and passes.

WHAT I SEE

Code measured about 2.87:1 for the strongest element in this whole region (weakest spot 2.54:1, #ffffff on #10b981). That is below the 4.5:1 AA minimum for body text (3:1 for large text and UI components).

WHAT TO DO

Change the text colour to #4B8077 (or darker) so it reaches 4.5 : 1 on this background. It stays close to the current colour.

6 Low-contrast text or UI measured at about 4.09:1

Minor · defect · measured by code

Text that is too close in brightness to its background is hard to read. People with weaker eyesight struggle most, but so does anyone on a phone in sunlight or on a dim screen.

Affects: People with low vision, and anyone outdoors or on a dim screen

NOW	4.1 : 1	SUGGESTED	4.5 : 1
Sample text The same words at small size		Sample text The same words at small size	

Try `#69788C` for the text colour. It keeps the look and passes.

WHAT I SEE

Code measured about 4.09:1 for the strongest element in this whole region (weakest spot 3.05:1, #8995a6 on #ffffff). That is below the 4.5:1 AA minimum for body text (3:1 for large text and UI components).

WHAT TO DO

Change the text colour to #69788C (or darker) so it reaches 4.5 : 1 on this background. It stays close to the current colour.

7 Low-contrast text or UI measured at about 3.35:1

Minor · defect · measured by code

Text that is too close in brightness to its background is hard to read. People with weaker eyesight struggle most, but so does anyone on a phone in sunlight or on a dim screen.

Affects: People with low vision, and anyone outdoors or on a dim screen

NOW 3.3 : 1	SUGGESTED 4.5 : 1
Sample text The same words at small size	Sample text The same words at small size

Try `#5A68ED` for the text colour. It keeps the look and passes.

WHAT I SEE

Code measured about 3.35:1 for the strongest element in this whole region (weakest spot 2.21:1, #36c495 on #ffffff). That is below the 4.5:1 AA minimum for body text (3:1 for large text and UI components).

WHAT TO DO

Change the text colour to #5A68ED (or darker) so it reaches 4.5 : 1 on this background. It stays close to the current colour.

8 Active tab indicator clarity in sidebar

Major · worth checking

Users might struggle to instantly identify their current location within the application navigation.

WHAT I SEE

The active 'Transactions' navigation item uses a light purple background tint with purple text, which lacks a strong primary indicator bar or heavy contrast weight.

WHAT TO DO

Add a solid left accent border or stronger colour differentiation for the active navigation item.

9 Multiple competing actions in quick actions panel

Minor worth checking

When all actions look identical, cognitive load increases as the eye has no primary path.

WHAT I SEE

The 'Quick actions' card presents four buttons styled with identical visual weight and styling.

WHAT TO DO

Establish a hierarchy by giving the most common action (e.g., 'Add transaction') a primary filled button style.

▼ What works (3)

- Clean, well-structured card layout grouping financial domains logically (balances, cash flow, spending, goals, transactions).
- Consistent navigation sidebar with clear active states and recognizable icons.
- Good use of mini sparklines and trend indicators within KPI cards for quick glanceability.

▼ Cannot be judged from a screenshot (3)

- Keyboard focus trap behaviour and screen reader tab order
- Interactive hover, active, and loading states for buttons and charts
- Responsive layout adaptation at mobile or tablet viewport sizes
